

After you have applied Hotheads, ensure that your client has all the proper tools to care for their new hair before they leave the salon. To help you with this, we have formulated our product line specifically for second-hair. Second hair is hair not attached to the head and not receiving all the necessary nutrients from the scalp. To ensure your client is informed on the proper care of Hotheads Hair Extensions, provide them with the list of Hothead's Client Dos & Don'ts:

CLIENT DOS

Do wait 24-48 hours before washing or chemically processing your hair.

Do use a soft, boar bristle brush; starting at the ends and working your way up, always brushing in a downward motion. Brush before and after shampooing to keep hair from matting.

Do use a good leave in conditioner from mid shaft to ends, keeping away from the adhesive bands. For best results use Hotheads products to keep extensions silky, healthy, and irresistibly soft.

Do wear your hair in a ponytail when swimming, exercising and sleeping.

Do have a licensed professional remove and reapply your extensions.

CLIENT DON'TS

Don't use any products containing alcohol, oil, or ethanol. Alcohol based products are drying to the hair and can compromise the strength of the adhesive bond.

Don't brush hair harshly.

Don't go to bed with your hair wet.

Don't chemically process your hair at home. Rely on your salon professional for any services while wearing extensions.

Don't remove your extensions yourself.
